

Lab technician in microbiology

Description

The Laloux Lab is a research group of the *de Duve Institute*, an international institute of fundamental research located in Brussels, in the heart of Europe, on the medical campus of UCLouvain (the largest university in the French-speaking part of Belgium). We use techniques of bacterial genetics, molecular biology, cell biology, biochemistry and microscopy to discover the molecular bases of the cell cycle of a predatory bacterium.

We are looking for a motivated lab technician who will be responsible for:

- Molecular cloning
- Various lab organization tasks
- Preparing sterile media, solutions and labware
- Experimental support for other lab members
- Personal research project depending on the ongoing projects and needs.

Required skills

- Lab tech Bachelor degree or equivalent (a Bachelor degree is required)
- A good level of English is indispensable (our team is international)
- Motivation and interest for academic research
- Reliability, precision, quality-oriented, good organisation skills
- Autonomy
- Team work

Contract

One year, potentially renewable, *starting from July 1st, 2019 at the latest.*

What we offer

A stimulating research environment in a young and highly motivated team, with strong interactions with other research groups. Our lab tech will have a key role in optimizing the daily lab life and organization while having the possibility to conduct his/her own research project.

Contact

Please send your CV (including contact information of at least one reference person) and motivation letter to Prof. Géraldine Laloux at geraldine.laloux@uclouvain.be. Only the candidates that fit our criteria will be contacted for interview.
