A career focused on the future ...

It's 9 o'clock, you've just arrived at the office and you realize something bad happen during the night. A broken pipe damaged all the computers in your department and of course, yours is one of the casualties. Luckily, you've saved all your files on the cloud!

For every email you send, every app you use, every video you watch online, servers based in DATA Centers are required.

Their maintenance is crucial because the service needs to work 24h/24h, 7 days a week with optimum energy efficiency, high responsiveness and significant security constraints.

Develop your talents

Training	Master's degree (two years)
	Short modular trainings (from 1 to 5)
Practice	Online courses and one week of practice in a real DATA center lab (in Mons, Belgium)
Skills	Master technical skills as PLC programmable, electrical maintenance, data operations, method of cooling, quality process...
Carrer Paths	Data center design and operations, hardware operation, quality manager, sustainability director, ...
