

Job title	<i>Medical device Designer</i>
------------------	--------------------------------

Context

3D-Side (www.3Dside.eu) assists surgeons by integrating 3D technologies in the operating theater. One combines our engineering accuracy with medical expertise to individualize the surgical treatment of each patient. Using advanced software, additive manufacturing technologies and strong knowledge of the surgical field, 3D-Side plans complex interventions and provides the surgeon with patient-specific instruments or custom implants to perform the surgery. 3D-side develops software solutions to manage the manufacturing of patient-specific products.

Key responsibilities

- 3D design of patient-specific implants and instruments
- Communication with all third-parties (surgeons, distributors and customers)
- Respect the deliverables and timeline of surgeries
- Ensure the good quality of the device
- Ensure the good connection with the manufacturing department

Required Skills & Experience

- Bachelor degree
- Experience with medical images or 3D software is a plus
- Languages:
 - English or French is mandatory for a daily practice
 - Written English is a must
- Ability to work under the company procedures
- Excellent organizational and time management skills
- Strong attention to detail
- Quality minded
- Self-motivated
- Customer and patient oriented

What we offer:

- competitive salary and benefits package
- a stimulating professional working environment in the Medical Device Sector
- motivated team
- international scale-up
- meaningful purpose of the work (saving life and improve quality of life)
